Adobe Photoshop CC 2014 Free [32|64bit]

Photoshop (or any other raster image-editing program) does not magically transform your camera into a powerful tool. The process remains the same as it does for taking images in any other digital camera — point and shoot or DSLR. The big difference lies in the additional work of formatting your image into a Photoshop file. Tools and features in the latest versions of Photoshop include layers, smart objects, masks, adjustment layers, and selections. Through these tools, you can create photos that contain more than one image or create an image that has been modified a number of different ways. See Chapters 5 and 6 for more on this topic. Getting

Your Image Into Photoshop When using a camera, the first step in designing a new image is to get your photo files into the computer. Today, most digital cameras produce RAW files, the largest of which are around 24 megapixels, although most cameras output smaller photos for Internet sharing and such. Follow these steps to get your image into your computer: 1. Plug your camera or memory card into a memory card reader and switch on the camera. 2. Attach the power adapter to the camera. 3. Select the camera menu option for Playback (refer to the list earlier in this chapter). 4. Select Image Quality and choose RAW. This option is available on some point-and-shoot cameras and most advanced cameras. See your camera manual to find out if this option is available. 5. Press the Menu button to display the camera's menus. 6. Scroll to Set Image Quality and press the OK button. 7. Scroll to Set Image Quality and press the OK

button. 8. You'll see a screen for setting RAW or JPEG. If you chose RAW, select the RAW option and then press the OK button to set the file format. If you chose JPEG, select JPEG and press the OK button to set the file format. 9. Set the value for Quality as you see fit (for example, Fine for a fine-quality image). See your camera manual to find out how to adjust the settings. 10. Press the Menu button to select the Menu in the right Bottom Corner option. 11. Scroll down to Set As, press the OK button, and follow the instructions on your camera's screen. 12. Set the Image Compression to High or Fine, based on the settings in your camera. 13.

Getty Images The Ravens have a three-month old son, so getting to see photos of him was all but certain when the team returned from training camp in M&T Bank Stadium.

Baltimore coach John Harbaugh got to spend time with his family, even if it was in plastic rather than oak. Harbaugh shared a photo of little Bo with a keyboard via Twitter. The Baltimore Sun's Jamison Hensley said Harbaugh got to carry a copy of his son's birth certificate. "I think that part of it was a little window into the fact that this is really happening," Harbaugh said of carrying the certificate. "It's happening to you and your wife. Your immediate family has a record of this. At any moment of your life, he could be in your arms. It's an incredible feeling. It's an incredible thing." For now, Bo's routine has been pretty simple. Harbaugh said

he hasn't let him eat much, perhaps a cracker once or twice a day. "You have to be patient," Harbaugh said. "He's still a baby. It's a challenge, you're going to have to be patient. You will get to see him grow, that's for sure. That's going to be part of your daily routine. He's probably going to be playing more ball than feeding every day. He's going to be doing both." Until then, Harbaugh will try to get a glimpse of his family's baby and take some time to just soak up the experience.
