History [edit] AutoCAD originated with a software package called Micro-CAD (Microcomputer-Aided Drafting), which was developed by Micro Design Products of St. Louis, Missouri and released in 1979. Micro-CAD was developed as a CAD package for users of small business computers with dedicated graphics terminals. The Micro-CAD product required a high-end computer system and a high-end graphics terminal, and was intended for a home office environment. The earliest version of AutoCAD (AutoCAD 1.0) was written by Bruce Johnson (who had also written the Micro-CAD program) and Bill Charnley, with the help of original Micro-CAD creator Larry Cuccinale. Johnson and Charnley wrote the first versions of AutoCAD on Apple II computers with a GEM Graphics Editor, and later on Apple IIe computers with a GEM Plus graphics board. The first version of AutoCAD was released on December 4, 1982. AutoCAD was one of the first CAD software products that used the concept of levels, with most levels being rectangles, which made it easier for the user to create 2D sketches. Other features included exact coordinates, a variable coordinate mode, the ability to edit blocks and layers, object-oriented interface, and the ability to create freehand sketches. AutoCAD 2 (Version 2.0) was released in 1984. AutoCAD 2 included an unlimited supply of hatch lines, a drawing history, the ability to save drawings in the format of the Micro-CAD program, and the ability to save a drawing in a variety of different formats, including Micro-CAD. AutoCAD 3 (Version 3.0) was released in 1987, with the ability to zoom into the drawing, an ability to rotate object in the drawing, and improved object and dimension editing. In addition, the ability to save a drawing in Postscript and Micro-CAD

I will be walking back to my home as soon as I finish my study. OR I will be taking back to my home as soon as I finish my study. I am not sure if both are correct. A: Both are fine, although the first sounds more natural to me. I think it's because "take back" sounds more like something you might do in a game. In particular, "I'll take back this money!" sounds more like a situation in which you're losing money, rather than a situation in which you're gaining money. But I think it's a very subtle difference. Although you're not referring to playing a game (but rather to paying for the coffee), I can't say I hear that much difference either. It's a matter of perspective. The Southern California Public Health Authority has been forced to furlough more than 400 employees, according to a county official. Sheriff's Lt. Guy Brewer said on Friday that the health authority had begun laying off about 4:30 a.m. on Tuesday. The health authority began its furloughs as the result of a decision to cut $1.2 million in the current fiscal year. Previously a1d647c40b

April 23, 1980. *740 Raymond T. Elligett, Jr., of Miller, Hodges & Kagan, P.A., West Palm Beach, for appellant. W. Newton Clarke, Jr., of Clarke, MaGoye & Cardona, Palm Beach, for appellee. GRIMES, Judge. The primary issue in this case is whether the uninsured motorist coverage of an insurance policy is primary or secondary to the bodily injury coverage provided by the owner of the vehicle which caused the injury. The trial court held that it was primary. We disagree. In connection with her marriage to plaintiff, Mrs. Sand purchased a car from the defendant, Harford Insurance Company. After the marriage had been dissolved, the car was driven primarily by plaintiff and his mother until the car was stolen and, a few weeks later, driven into the plaintiff by an uninsured motorist. This resulted in the injuries for which plaintiff brought this action. The vehicle was insured with a policy which had been issued by Lumbermens Mutual Casualty Company. It covered plaintiff and his mother, as well as defendant and his son. The policy was made retroactive to the date of the purchase of the car. The Harford policy contained the following exclusion: A. We do not provide Uninsured Motorists coverage with respect to: * * * * * * (2) Any person while using any motor vehicle owned or hired by such person, and any resident relative, with the express or implied permission of the owner, unless that motor vehicle is an insured motor vehicle or a newly acquired motor vehicle. The policy did not provide uninsured motorist coverage to "anyone using any automobile except an insured automobile." Although the Lumbermens policy did

New: Add a profile to the XREF arrow when it is needed The new "Add Profile" option in the Properties palette allows you to attach a profile to the XREF arrow. In the case of XREF, "profile" refers to the single profile, which is the profile of the current cross-reference system. When "Add Profile" is selected, the profile is added to the collection of profiles that are attached to the arrow. By default, the current cross-reference system is selected. (video: 2:04 min.) New: Get current shape when setting the current profile When the current profile of an XREF arrow is modified, the object shows the current shape of the cross-referenced part and the current hatch pattern. (video: 2:04 min.) New: Assign custom colors to annotation colors You can now assign a custom color to an annotation color by clicking "Assign" on the palette (when the annotation color is selected).
