BioImage Convert is a user-friendly software utility that allows you to convert between images. This includes image to image, image to text, and text to image. Its multi-format support allows you to convert images from more than one format to another. You can combine the conversion and extraction functions into one workflow, which saves time and effort. BioImage Convert is a command line utility, which allows you to perform batch conversions. You can call BioImage Convert from the command line to perform bulk conversions. BioImage Convert supports multi-threading which greatly improves the conversion speed. BioImage Convert has a powerful feature of setting the file format and/or pixel and color mode. Currently, BioImage Convert supports OME-TIFF, OME, TIFF, Metamorph STK, NanoZoomer-ST. BioImage Convert Key features: * Convert between more than two formats at the same time. * Extract metadata from image, such as EXIF, IPTC and XMP. * Extract text from image files. * Convert a BMP file into a PNG format. * Convert a JPEG file into a TIFF file. * Importing and exporting multiple images at once. * Batch conversion and extraction of image from any number of files. * Save files with more than one filename. * Works with Windows, Linux, Unix and Mac OS X. * Supports multi-threading, therefore improving conversion speed. * Implemented, in part, by a freely available reference implementation. * Suitable for batch conversions. * Suitable for both embedded and desktop use. * Fully free and open source software under the GPL license. * Written entirely in ANSI C with no other dependencies. * BioImage Convert Home Page: (I removed the old news link) BioImage Convert Download: BioImage Convert Download: BioImage Convert Download:

What's New in the BioImage Convert?

BioImage Convert is an accessible and handy application that was developed as a Command Line image conversion utility. It can read and write many image formats, extract ROI and meta-data stored in images. Accepted image formats are: BioRad PIC, TIFF, OME-TIFF, Metamorph STK (uncompressed and LZW compressed), Fluoview, Olympus Image Binary (OIB), Carl Zeiss LSM 5, PSIA TIFF, Nanoscope II/III, JPEG, PNG, BMP, IBW, OME, RAW and video: QuickTime, AVI, MPEG1/2/4, Flash, etc. BioImage Convert Features: 1) Image Formats supported: BioImage Convert can read and write many image formats. Supported are: BioRad PIC, TIFF, OME-TIFF, Metamorph STK (uncompressed and LZW compressed), Fluoview, Olympus Image Binary (OIB), Carl Zeiss LSM 5, PSIA TIFF, Nanoscope II/III, JPEG, PNG, BMP, IBW, OME, RAW and video: QuickTime, AVI, MPEG1/2/4, Flash, etc. 2) ROI Extraction: BioImage Convert can extract ROI from images. It supports ROI extraction from the entire image or from the selected image parts. 3) Meta-data Extraction: BioImage Convert can extract meta-data from images. It supports many metadata fields: File Size, Date, Image Width, Image Height, Resolution, Orientation, Pixel Density, etc. 4) Meta-data supports: BioImage Convert supports many metadata fields and provides a way to manipulate them (add, change, remove, etc). 5) Batch processing: BioImage Convert allows batch processing of images. For example you can select images, perform a ROI extraction, apply some command line settings and save the result as a new image. This can be useful if you want to convert a lot of images in a single conversion job. 6) Command Line Interface: BioImage Convert provides an easy command line interface. You can enter and manage conversions, select input and output folders, etc. with command line settings. BioImage Convert Usage: 1) In order to convert an image, first, you need to create a conversion script and then run the script in the command line using BioImage Convert 2) After running a conversion script, the BioImage Convert process ends when it receives the last output image. 3) BioImage Convert is a command line application. So if you do not want the BioImage Convert GUI to be shown, you need to run BioImage Convert as a command line application. In order to do so, set the Working Directory in BioImage Convert preferences, as below: Bio
