Hacker De Tiro Perfecto Para Dragonbound Facebook Hacker De Tiro Perfecto Para NOXA4 is essential for meiotic progression and female fertility. NOXA1 and NOXA2 are apoptosis-inducing factors that regulate NF-kappaB activation in response to different cellular stresses. Recently, we showed that NOXA1 regulates cellular redox homeostasis by maintaining Nrf2 as a

redox-sensitive transcriptional activator. Here, we characterized a novel NOXA family member, NOXA4. Immunohistochemical analysis revealed that NOXA4 is expressed in several tissues such as lung, liver, pancreas, kidney, stomach and prostate. Knockdown of NOXA4 by lentiviral-mediated shRNA in mouse embryonic fibroblasts (MEFs) led to severely impaired proliferation. Interestingly, NOXA4-deficient MEFs developed giant nuclei, indicative of a SAC defect, along with defects in spindle organization and chromosome segregation. NOXA4-deficient MEFs exhibited a defect in survival following prolonged mitotic stress. Loss of NOXA4 increased the population of polyploid cells in addition to the population of 4N cells and led to premature senescence in human fetal lung fibroblasts. In mice, NOXA4 depletion caused early postnatal lethality due to growth retardation. NOXA4-deficient females were infertile, accompanied by a reduced number of mature oocytes, while male mice were fertile. Our data suggest that NOXA4 plays a critical role in the maintenance of spindle integrity and oocyte maturation.
