The NSF Splitter works exactly the way how its name suggests. It can split huge NSF files into multiple smaller files without any hassle. It works well with all the versions of Lotus Notes including NSF and Lotus Notes 6.0 and 7.0. It can split Mailbox, Contacts and Archive NSF files, as well as Personal, Private and Public NSF files into multiple files depending on the date, splitters and more. The splitting of NSF files is performed in an automatic manner, thus leaving users to the process of saving the newly generated NSF files. The NSF Splitter can be used to split NSF documents that are not being used anymore. It can create NSF files that contain all the contents of the NSF file being split. Users can have the option of creating single or multiple NSF files from a single NSF. It has the ability to sort the newly generated NSF files by different options, such as by the date, name and size of the file. The NSF Splitter can be used to split multi-recipient NSF documents, so that the contents are split as per the various recipients. A large NSF file can be split into multiple NSF files and an archive file can be created, in an effortless manner. NSF files can be split and shared with co-workers, thus helping you save time and effort. Features: It is compatible with all the versions of Lotus Notes including NSF and Lotus Notes 6.0 and 7.0 NSF and Lotus Notes 6.0 and 7.0 Split Mailbox, Contacts and Archive NSF files Split Personal, Private and Public NSF files Split multi-recipient NSF files Create a NSF output document with all the contents of the NSF file being split Create single or multiple NSF files from a single NSF Create archive file of the original NSF file Sorting of NSF files by date, size, name and more The NSF Splitter is available as a standalone app and can be downloaded from the web. When you launch this app, it will ask you to choose the NSF file from your machine. You will then be prompted to select the folder where you would like to save the newly generated NSF files. The app will then take a few moments to perform the splitting of the

Shoviv NSF Splitter is a lightweight software solution that was designed, as its name strongly suggests, to help you split large NSF documents into smaller files in an effortless manner. Before you deploy this software solution on your computer, you should be aware that it requires Lotus Notes to be installed beforehand, so that it can be launched and operated properly. This app can split mailbox, contacts and archive NSF contents into smaller, individual files that can be managed in an easier manner. The archive database for NSFs is reduced as per size, sender's email address and date. It can create single or multiple NSF output documents depending on the user's need and the date. The newly generated NSF files can be saved into a destination folder that the users can choose, depending on their preferences. Its interface is quite simplistic and features a bunch of controls that are displayed directly on the main screen, thus being highly accessible. In order to perform an NSF file splitting operation, users need to select the desired file and load it into the app, adjust the split options according to their needs and check the status of the operation if they want. File Splitting / Combining Tool for Lotus Notes & Domino Files. You need to install this software solution if you want to split the large NSF file into smaller NSF files. Aloe vera extract inhibits B16 melanoma cell line in vitro. Aloe vera has been used for centuries as a traditional medicine to treat burns, wounds, infections, and various skin problems. In this study, we aimed to determine the possible in vitro effect of Aloe vera extract on cell viability, proliferation, and apoptosis in B16 melanoma cells. B16 cells were cultured in Dulbecco's modified Eagle's medium supplemented with 10% fetal bovine serum and 10% Aloe vera extract at different concentrations (0.1%, 0.5%, 1.0%, 2.0%, 3.0%, 4.0%, 5.0%, and 6.0%) for different time intervals (24, 48, and 72 hours). At the end of each period, cell viability was determined by the MTT method and the cell proliferation by the BrdU method. The level of apoptosis was detected by the staining of DNA fragmentation with Hoechst 33342. The total RNA was extracted by a RNA extraction kit and evaluated by the colorimetric method. The results showed that all concentrations of Aloe vera extract inhibit B16 cells and decrease the cell viability in a time-dependent manner. These effects were statistically significant (P<0.05).
