Adobe Photoshop CS6 Crack + With Product Key

1. **After downloading and installing Photoshop CS6, launch the program.** When Photoshop first loads, you can immediately start working on your document to continue your Illustrator or Photoshop Lightroom workflow. If you have added layers, you may need to rearrange them to accommodate the new size of the canvas. 2. **Open a new document in Photoshop and create a new layer for your image.** 3. **Use the** **[Paint]** **tool to draw a vector object in the shape of an airplane using any of the shapes that are available.** Photoshop organizes its tools along three paths: the main brush, pixel tools, and the default tools. The **Paint** tool is the default tool, so you'll find it at the bottom of the tools list (the default brush set is found on the Custom Tool Options panel). You can select the Brush Preset from the left side of the main menu, and the Brush Preset Picker will appear. 4. **Click the** **Paint** **tool and then select the Shape tool.** The Shape tool is a different kind of Paint tool in that it offers geometric shapes that you can manipulate. In the Customize Shape panel, choose Airplane from the Shape Type menu. Click the Brush Preset Picker button to access an Airplane brush. 5. **Draw an airplane and add it to the new layer.** Click the Subtract button in the shape-drawing panel and the paint strokes of the shape will subtract from the shape you selected, as shown in Figure 3-2. It's always a good idea to add another layer or image to a document so you have a place to go back to if you start to run out of options. Figure 3-2: Subtract with the Subtract button on a shape tool. 6. **Draw another airplane, subtract, add another airplane, and so on.** Subtracting from an airplane, while a useful technique, isn't the focus of this exercise. We're going to use the _Waste Brush_ by the way. 7. **Press the** **Shift+D** **(or the** **Shift+M** **key)** **key on your keyboard to create a new, transparent, and white rectangle above your previous airplane.** This is the "waste" we will

The folks at Microsoft Research's Glabs recently picked up a camera from the office and put it together with a smartphone and a sensor that is nearly twice the size of the one that's found on a typical digital camera. The setup, which can even work underwater, is called "Unsnap," and it's designed to help you capture photos that tell a more complete story — just like a comic book, the thinking goes. Unsnap's main camera, called "Glucam," looks like a compact point-and-shoot camera that's attached to the back of a smartphone. Glucam snaps a bunch of photos, as people would normally do, and then selects which photos will be combined into a single illustration. It's similar to multiplexing on a home VCR. "You can tell a story by zooming in," says Glabs researcher Rahav Segev, who developed the Glucam system. "The idea is, let the user focus on the interesting portion of the picture." Then, rather than taking the story out of the context in which the photo was taken, Segev's team lets you do that in real-time. In the video above, for example, Glucam helps you create a six-panel comic about a dinner party. Enlarge Image Microsoft The Glucam team also includes a few scientists from JPL's Mars Lab, along with Microsoft researchers who have worked in depth on multimedia techniques. Unsurprisingly, this project is named after the solar system's fastest-moving planet. "The idea is that you could use this as an augmented reality device with your smartphone," says Segev, "so you could literally have images that can jump out of the background. The user could move through the world. Imagine, for example, that you're taking a picture of your child and you want to tell his or her teacher that he or she is on a field trip." Another Unsnap application, called "X-Glucam," is a photo creation tool that lets you draw straight lines and then snap a picture. The Glucam on the back of the smartphone can identify various objects in the photo and place them on an illustration. "It's like tag-tagging," says Segev. "It's like comic book superpowers. Say, for example, you can put 'taco' on a dinosaur and it can be placed anywhere." The combination of computers and camera sensors

A quick tour of the inside of an imaginary car With all of the talk about the technical prowess of the Tesla Model S and other luxury EVs, it seems that the search for a performance EV has become a bit obtuse. As such, we imagine that if you're still looking for a vehicle that can give you a bit of go around the top of the scale, that you may be considering the small, gas-burning compact. Now you can run interference for yourself, as we have made an admittedly rudimentary video explaining what you might see when you look inside of one of these tiny sports cars. It's an interesting look. No, seriously. The video was made for an EV race series taking place in Spain this year, so the panning motion we see around the vehicle makes a little more sense. Either way, we see less of the engine and more of the gearbox and differential, with a little look at the brakes, suspension and steering system. The amazing thing is that the engine is more or less at the back of the vehicle, and that there is a fairly large center of gravity. It's a little hard to make sense of it all, since we don't really know what vehicle it is, although it does appear to be a vehicle built in Spain. And though the video has some issues, it's actually pretty solid on the rest of it, which is likely all that really matters. { "images" : [{ "idiom" : "universal", "filename" : "SearchPressed@1x.png", "scale" : "1x" }, { "idiom" : "universal", "filename" : "SearchPressed@2x.png", "scale" : "2x" }, { "idiom" : "universal", "filename" : "SearchPressed@3x.png", "scale" : "3x" }], "info" : { "version" : 1, "author"
