"AutoCAD is ideal for a broad spectrum of users, from beginners to professionals. It offers rich drawing tools and powerful on-screen help for users who need a little help or quick solutions." — "AutoCAD is the world's best-selling and most popular 2D drafting program." — "AutoCAD is a complete solution for 2D drafting and design. It makes it easy for users to get the information they need, in the format that they want, and on the terms that they require." AutoCAD vs. AutoCAD LT

Autodesk AutoCAD LT is a smaller, less powerful version of AutoCAD that is designed for use in schools, colleges, and small businesses. The two software applications share a lot of features, but AutoCAD LT doesn't have many of AutoCAD's advanced features, such as the ability to change the default units or an undo history. AutoCAD LT also lacks some of the most advanced options, like features for importing or exporting DWG files. AutoCAD LT is also slightly less expensive than AutoCAD. Each of the two software applications, when purchased as a single-user license, costs about \$1,100. A single-user license for AutoCAD LT is about \$250, while a single-user license for AutoCAD is about \$1,500. AutoCAD LT also has more functions than AutoCAD but is only a fraction of the size of AutoCAD. AutoCAD LT lacks many of the features of AutoCAD, including: AutoCAD LT is available in both Academic and Student versions. The Student edition of AutoCAD LT has the same features as the Academic edition of AutoCAD LT, but has fewer capabilities. AutoCAD LT will run in 32-bit or 64-bit Windows operating systems, and in Windows 8. It can be used on either a desktop PC or a notebook computer. AutoCAD LT can be installed on any existing copy of AutoCAD on the same computer, which is useful for students, instructors, and instructors who want to use AutoCAD LT with AutoCAD. Note: The Student edition of AutoCAD LT and the Academic edition of AutoCAD LT are not available for use with Windows 10. AutoCAD LT and AutoCAD LT Student Edition do run on Windows 10 Enterprise, Windows 10 Professional, Windows

References Further reading General Lighting systems are used in many environments for a variety of purposes. For example, lighting systems may be used in shops, factories, large building, and other environments where it is desired to illuminate a space. Referring to FIG. 1, a conventional lighting system comprises a number of incandescent bulbs 101 connected in series to provide a total amount of power for illuminating a space. As illustrated, the lighting system includes a junction box 102, an electrical cable 103, and a power source 104. In a typical installation, the incandescent bulbs 101 are positioned at the bottom of the junction box 102 and the electrical cable 103 is routed to the top of the junction box 102. A power source 104 is connected to the junction box 102, which then connects the power source 104 to the power input terminals of the

incandescent bulbs 101. Unfortunately, conventional lighting systems suffer from a number of drawbacks. For example, the junction box 102, electrical cable 103, and power source 104 all take up valuable space. Moreover, incandescent bulbs 101 are inefficient because approximately  $\frac{1}{3}$  of the energy generated by the bulbs is wasted as heat. Thus, there is a need for an improved lighting system that does not require a junction box, an electrical cable, or a power source.

Skilled artisans will appreciate that elements in the figures are illustrated for simplicity and clarity and have not necessarily been drawn to scale. For example, the dimensions of some of the elements in the figures may be exaggerated relative to other elements to help to improve understanding of embodiments of the present invention.

[The mediator effect of depression in the relationship between life stress and physical health]. This study aimed to analyze the mediator role of depression on the relationship between life stress and physical health, and to examine which mediating variables have an effect on this relationship. The data used in this study were collected from the baseline survey of the Korean Welfare Panel Study (KOWEPS) for 2016. The subjects included in this study were 1,412 households who were enrolled in the KOWEPS. The life stress variables included economic hardship, lack of social support, divorce, parental death, work-related problems, and health insurance problems. Depression was measured with the 6-item Center for Epidemiologic Studies Depression (CES-D) scale. Physical health was measured with the 3-item physical health measure (PHM). We analyzed the mediating effects of depression using the "indirect effect" method by calculating the indirect effects of life stress. The mediator effect of depression was present for all life stress variables. In the case of lack of social support and parental death, the mediator effect of depression on the relationship between life stress and physical health was considerably stronger than in the case of economic hardship, work-related problems, and health insurance problems. The mediator effect of depression on the relationship between life stress and physical health can be analyzed based on economic hardship, lack of social support, divorce, parental death, work-related problems, and health insurance problems. In particular, the mediating effect of depression on the relationship between life stress and physical health is stronger when there is a lack of social support and parental death.

The Trump administration wants to eliminate a program that helps thousands of Central American immigrants get a temporary work visa. The decision, announced Wednesday, comes as the administration has announced steps to ramp up deportations. The program — known as TPS, for Temporary Protected Status — shields nearly 300,000 immigrants who fled the chaos in their home countries because of violence, natural disasters and other crises. The immigrants cannot return to
