In the early 1980s, a new type of software development was introduced by a small software company named Originator Corporation. Their first product was a new type of CAD called Computer-Aided Design which was revolutionary in its time. AutoCAD was developed as a response to this CAD system. The first version of AutoCAD was released in December 1982 as a desktop app running on microcomputers with internal graphics controllers. Before AutoCAD was introduced, most commercial CAD programs ran on mainframe computers or minicomputers, with each CAD operator (user) working at a separate graphics terminal. A few years later, Autodesk released AutoCAD for Macintosh. One of the first widely recognized uses of AutoCAD was in the repair of the Hubble Space Telescope. Later, AutoCAD was
