1. Begin by opening the drawing. Open the drawing you want to edit. In a large drawing, often referred to as a “catastrophic drawing”, opening the drawing will open a new, separate drawing window and make the drawing invisible, so it will not obstruct access to other drawings. However, such a large drawing is easier to work on than a drawing with many windows, such as a three-window drawing.

2. Create a new drawing window. The easiest way to open a new window is to use the standard command Window ► New Window.

3. Insert the drawing into the new drawing window. Click the

Drawing Objects button in the status bar to switch to a Layout view and then drag and drop the drawing into the new window. 4. Enter edit mode. In Windows, select the drawing object you want to edit. This can be done by pressing the shift key and clicking the drawing object, or by using the standard command Select. For more information about edit mode, see Enter edit mode. 5. Position the object. You can move the object in the current viewport in the drawing window by using the standard commands Move, Move (or MoveBack) and Move (or MoveBack) Selected, as follows: In Windows, to move an object horizontally, press and hold the ALT key and click an object in the current viewport. If you

want to move the object vertically, press and hold the SHIFT key and click an object in the current viewport. In Mac, to move an object horizontally, click an object in the current viewport. To move an object vertically, select the object and click in the active viewport. In Windows, if you want to move an object to another area in the drawing window, click the drawing object. Then click the area in the new window where you want to place the object. 6. Apply graphics settings. Click the Objects button in the status bar to switch to a Graphic Styles panel and then click the icon for the graphic setting that you want to apply. 7. Modify the object. Use the standard commands to modify the graphic

setting: To modify the transparency of a selected object, open the Transparency panel, select the appropriate graphic setting, and drag the Transparency slider to the left or right.
