You don't need to be a professional to edit your own photos or draw. Photoshop Elements is the photo and graphic editor to help you manage your images and share them. Learn how to use Photoshop Elements with the help of our in-depth Photoshop Elements tutorial below. Check the video tutorial below: The Photoshop Elements Training Tutorial How Photoshop Elements works While you use Photoshop Elements for simple tasks like changing colors, editing text and retouching old photos, you can actually work with a new Photoshop Elements project file. All you need to do to create your own Photoshop Elements files is to get your photos and add information to them. This tutorial will show you how to create a new Photoshop Elements file from your photos: 1. Get your photos and add text This Photoshop Elements tutorial will help you edit photos from the Canon Powershot SX50 HS camera. You can use any photos as long as the photos have good enough quality. Since the Canon Powershot SX50 HS camera records photos in raw format, you can use the RAW Converter to convert your camera photos into JPEG format. The camera can store five images at a time, which means you can store more than five photos in the same folder. You need to use the full capacity for storing photos if you want to edit your photos with Photoshop Elements. Let's open the Canon Powershot SX50 HS camera photos, so that we can add text on the photos. In this tutorial, you can choose one or more photos at a time. 1. Open the folder of your camera's pictures. You can find the pictures in the Pictures folder or Camera/Photo Settings/Camera Roll. 2. Select a folder for the photos. Click the arrow button on the left side of the Pictures tab or go to File/Open. If you can't find the folder you want to open, click Browse. Click on the Folder that you want to open and then click Open. For example, you can click on the Pictures tab to open the folder that contains all the photos from the Canon Powershot SX50 HS camera. 3. Preview each photo and choose the ones you want to keep. Scroll through each photo you want to keep by pressing Space. Press Space again to select the photos that you want to keep. 4. Delete the photos that you don't want.

Determination of the Absolute Configuration of Fused Cations in Singlet Oxygen. The stereochemistry of singlet oxygen ($^1\text{O}_2$) is often determined indirectly by the use of chiral photooxidants. However, the exact stereochemical information regarding how the radical cations are formed is not known because the excited states of each chiral photooxidant are not experimentally accessible. Herein, we show that the chirality of the S state of the dihydroxyketone p-dimethylaminocinnolinone (DAMC) is determined by the chirality of the epimeric ketone. A series of p-NO₂ and p-OCH₃ substituted DAMC derivatives were prepared. Reagent $^1\text{O}_2$ was generated using UVA irradiation of each molecule and the stereochemistry of the formed cations as determined from their hydroxyketones was compared to the stereochemistry of the starting compound and the starting reagent. It is found that the formed cations are always isomeric to the starting molecule and the epimeric ketone reacts in the S state to form radicals having the same stereochemical configuration as that of the starting molecule. Conditioned emotional responses in post-traumatic stress disorder. Previous studies have shown that the conditioned emotional response paradigm can be used to measure unconditioned autonomic responses in post-traumatic stress disorder (PTSD), and the present study demonstrates that this paradigm can be used to measure conditioned emotional responses. In this study, a conditioned emotional response was elicited in 8 PTSD patients and 6 healthy controls by pairing the presentation of the theme song from the television show "Quincy" with aversive stimuli. The parasympathetic nervous system was activated in response to the theme song in PTSD patients, as indicated by an increase in the beat-to-beat R-R interval ratio. The arousal and attention of the PTSD group were higher than that of the control group. The findings are discussed in terms of their significance for our understanding of the neural mechanisms underlying PTSD. I've been meaning to make a tutorial for this for a while now, and here it is. And the finished pony (image) I hope you find this helpful and that you go out and make a nice little pony for your friends to take pride in. It's always so much fun (and a great way of getting your friends to doodle) to see someone's made their favourite pony, so I'm sure
