I get an error because setState is not an available function in this context (I guess). export function Register() { const [firstName, setFirstName] = useState(null); const [registration, setRegistration] = useState(null); return (setFirstName(event.target.value)} /> setRegistration(event.target.value)} />); } Why does this happen? A: setState() and getState() are not static methods available on React hooks, and are only available in render functions: const [firstName, setFirstName] = useState(null); const [registration, setRegistration] = useState(null); const {firstName, registration} = useState(null); I'd probably recommend changing to the second/third example instead, if you're looking to render data that will change.
