Q: Laurent series expansion and deriving the expansion of $f(z) = \frac{1}{z^{n+1}}$. I'm having a bit of trouble with a few things: We have the function $f(z) = \frac{1}{z^{n+1}}$ What would be the Laurent series for this? I know that $\frac{1}{z^n}$ has a Laurent series expansion of $\frac{a_n}{z^n} + \frac{a_{n-1}}{z^{n-1}} + \dots + \frac{a_0}{z^0}$ But what would be the one for $\frac{1}{z^{n+1}}$? Is it going to end up $\frac{1}{z^0} + \frac{1}{z^1} + \dots + \frac{1}{z^n} + \frac{1}{z^{n+1}}$

$\sin\left(\frac{1}{z}\right)$? How can I prove it? Also, for the series expansion of $\sin\left(\frac{1}{z}\right)$, I used the formula $\sin\left(\frac{1}{z}\right) = \frac{e^{i\frac{1}{z}} - e^{-i\frac{1}{z}}}{2i}$ and took the $1/z$ outside the exponential function. But I'm not exactly sure if this is the right way to derive it. A: $\frac{1}{z^{n+1}}$ can be taken $a_0 + z\frac{a_1}{z} + z^2\frac{a_2}{z^2} + \dots$. But from your limit of the z there is no need to write it: $1 = z^0$. He is noted for his rather large bounty, and his weakness to the poison of Venus Butterfly. Although Lothar is weak to Venus Butterfly, he proves to be somewhat resistant to the feeling of "love".

The objective is to make as many coins as possible, by acquiring good cards, of course. It is a short game, 2-3 hours. Reviews “The game came out at a good time, because I had been feeling a bit of a lack of entertainment lately, but I wasn’t sure what to do. This game came in and helped me get through that, providing its own humor and unique atmosphere in a brief but accessible form.” - /r/Giovene, /r/BoardGames “Cartomante was a breath of fresh air.
