Maradona: How his opening kicks make him  
the fastest player on Earth As he showed in his  
first season with Boca Juniors, Diego Maradona  
is still capable of eye-catching skills. In fact,  
according to StatsBomb.com, he is the fastest  
player in the world. The Argentine's opening  
goals were tracked in his debut season with  
Boca Juniors, and they were dazzling. He's  
back, and he's still the fastest player on

Earth.Q: how can I drag and drop root from  
left to right in kivy? In kivy, using kv language,  
how can I drag and drop root from left to right,  
just like windows? I can drag and drop only  
from top to bottom. A: This is a not possible.

Kivy does not expose that information. You  
can wrap your root widget in a Layout with its  
orientation to horizontal. However, this is only  
a work around. If you want "true" drag and  
drop you should look into widgets that support  
Drag and drop like Is there a role for surgery

a. Talk to my owner:Online 01:44, 17 October 2015 (UTC) .Sunday, December 31, 2013 New Infertility Treatments Until recently, there had been so much fertility treatment research that the process seemed agonizing and like it would never be possible for couples to have their own children. There are now several new treatments that can achieve pregnancy in girls and boys. In this article, we look at several new technologies that can now help infertile couples have their own children. Testicular Tissue Cryopreservation One way that some men avoid fertility issues in the future is to store their testicular tissue. For men, the testes make the sex hormone, testosterone. As a man ages, his testes usually produce less testosterone. If this process can be stopped, men could keep their fertility intact. The testicular tissue would be put into liquid nitrogen, and then defrosted at a later date. Unfortunately, this technology is still being tested. Intracytoplasmic Sperm Injection (ICSI) Some men can have fertility problems that are caused by not having sperm. Infertility caused by a poor quality of sperm is known as male infertility. The easiest way to have a baby is to inseminate a woman with these sperm, but a man who is infertile has little chance of having children with his own sperm. Intracytoplasmic Sperm Injection (ICSI) was introduced in 1999. ICSI is a medical procedure that allows men with fertility problems to have children using their own sperm. During this procedure, a very small quantity of sperm is placed in the woman's egg. If the egg and sperm combine, then there is a good chance for a child to be born. Cryopreservation of Embryos A woman's eggs can be frozen for later. Once the eggs are frozen, they can be stored for future use. When the right time comes to bring the eggs to life, they can be fertilized with the partner's sperm. In some cases, a woman may have difficulty getting pregnant. Some women may have damage to the eggs which can cause fertility issues. In some cases, doctors are able to combine egg cells from a young girl with the partner's sperm.
