Q: Key Listener implementation using polling Hi all I am trying to create a system that reads (on a repeated basis) a large list of keys that are pressed, whether on the keyboard or a mouse. I am using polling and am having issues with the listener not being called. The listener is bound to the `setOnKeyListener()` on the `EditText`. Here is my source code: `class MyGuiApp extends Application implements View.OnTouchListener, View.OnKeyListener { //CALLBACKS public static int key_repeat = 100; private TextView textOut; private EditText textIn; private boolean started = false; private View.OnTouchListener listener = new View.OnTouchListener() { @Override public boolean onTouch(View v, MotionEvent event) { int x,y; x = (int) event.getX(); y = (int) event.getY(); textOut.setText("Coords: " + x + ", " + y); if (started) { textOut.postInvalidate(); } return true; } }; @Override public boolean onKey(View view, int keyCode, KeyEvent event) { if (keyCode == KeyEvent.KEYCODE_`
