What is an RGB image? RGB images are composed of three basic colors: red, green, and blue. These three basic colors make up every other color in the world. All images have at least three basic colors of red, green, and blue, but an RGB image has at least three more colors in the image: cyan, magenta, and yellow. All images have color information in the form of the numbers 0, 8, 16, 24, 32, 40, 48, 56, 64, 72, 80, 88, and 96. These are the hexadecimal (number) codes for each color. When you open a file in Photoshop, it automatically displays the colors of the image in a dialog box called the Channels palette. All three channels of the image are represented by different colors. The letters in the column label indicate the color of the channels of the RGB image. * Cyan, Blue Channel, is labeled cyan. * Magenta, Red Channel, is labeled magenta. * Yellow, Green Channel, is labeled yellow. Cyan and Magenta are the two colors that most people have seen in images. Yellow is the color that is either not in a photograph or not so easily visible when applied to a photograph. These two colors are combined to make white, which is the color used for the areas that are not tinted or shaded. Yellow is the third color and is used to enhance the appearance of the other colors. It is the brightest of the three colors. Cyan and magenta are combined with yellow to create a dull white color. An RGB image can include any number of colors. An image can be RGB, CMYK, or a combination of CMYK. Color Space Every color is represented by a number. For example, the number eight (0x48) is the value for the color red. However, these numbers are usually represented using hexadecimal numbers instead of two numbers. Hexadecimal numbers are created by using the number 0, followed by the number 4, then the letter A, B, C, D, E, and F, followed by a number. Hexadecimal values are easier to understand. The number of the color in this example is 0x48, meaning that the value of the red color is 48. RGB images are usually read in in RGB color space. It is important to know how to read RGB images

Q: Styling a multi value filter with CSS? I have a project where I am trying to implement a filter similar to the one listed below. I have searched for similar examples on the web but all I find are one values. What I'd like to do is have multiple values in my form filter. I've worked with jquery plugins before and I've even coded a few of them for a small scale project but this is beyond my current skills. Please note I do not want the filter to work on the page load. I have a javascript function which initializes the page and loads the data to be filtered. How would I go about doing this? filter: value = "Apple" | "Banana" | "Cactus" | "Etc"; A: You'd need to do two things in order to accomplish this. First, build up an array of all your option values with || separation like this: var values = ["Apple","Banana","Cactus","Etc"]; This will give you an array of the strings you want to use. Secondly, you'd need to give the select element a reasonable value like select[value="Apple||Banana||Cactus||Etc"] to match that in the querystring. Once you've done that, you'd probably just want to use a checkbox like this: Which will select all of them. If you wanted to clear the checkboxes, you'd do it like this: $("input[type=checkbox]").each(function() { if (this.value.match(/^\|Apple/i)) { this.checked = false; } }); This is assuming you have some way to parse the querystring into an array of values that match the ones you want (or construct it dynamically). If you're calling the function via a bookmark or similar, you'd probably have to adjust the value of the querystring to include the array of values. For more info about css, you might want to consider taking a look at style property sheets, which are pretty well supported for IE in particular. in the lower range.
