Finally the date has come: the EG launches on Alpha v1 0.0.1 on Skidrow. Do not believe in beta versions. Do not forget those who are waiting. After all, it's the middle of the month. Skidrow is still hosting, press release: Thanks to all the readers of this blog. If you want to know what I did over the last week as I made this version, see this post. To be precise, there is finally the EGG demo linked in the post below. In short: disappointment, Skidrow did not become usable. We can access only a list of plugins, nothing else. Demodex still is broken. Still no PUBG, only GTA Online. For next time, perhaps.

A series of plugins improved significantly. Allows the use of Fluid, Chronology, and XML.

Only one error of LC origin: this is a bug with the release of Kerch. Slightly uprisen, PUBG and GT: Outdoor. More.

If you want more information, you find two linked on this blog a more complete list of the changes.

Note that this is a stable version of our crack. Which means that you can...
