The province of Quebec is recalling two kinds of honey from the U.S., after tests showed it contained an elevated level of a chemical used in bee-killing pesticides. The Health Ministry said in a release late Wednesday that 30 metric tonnes of honey from Cape Cod, Mass. and 8 tonnes of honey from Florida, which came from the area where the chemical azadirachtin was found, were being recalled. Quebec has banned the use of azadirachtin in bee-harming pesticides for two years because it could kill bees, a crucial part of the food chain, said the release. The agriculture minister said samples from the Canadian honey showed the chemical was present at levels above the legal limit allowed for agriculture products. A new study has revealed that Sydney is the the capital city for struggling relationships. According to the Victorian Marriage Institute, the city is the most difficult to stay happy in, despite it having the top highest rate of marriages ending in

Q: Counting words in an array in Ruby I have a string which contains a few words seperated by space. I need to count the number of words in this string. say, "foo bar foobar bar foo foo foobar foobar".count("foo") What's the best way to do this? Thanks! A: ruby-1.9.2-p136 :011 > "foo bar foobar bar foo foo foobar foobar".split(" ").count("foo") => 2 A: Array#count expects a second argument for the String to be compared against. Use this: str.split(' ').count('foo') A: Ruby 1.9.3 has an answer too: str.split(" ").count("foo") If you can use ruby 2.0.0 then, according to this question and answers, the most pythonic way will be: str.translate(None,'').split(None)

Q: Can a file be "open" for editing? (Existing file) I have the following code: lolotxt mysqldump -uuser -ppassword -dmydatabase > lolotxt if I'm in the same directory of lolotxt i can do: echo "hello world" >> lolotxt and it will append to lolotxt. If I do: lolotxt I get: error: open file 'lolotxt' for writing: No such file or directory From my understanding the os (or whatever) is trying to open lolotxt to write to it, which is where the error is being thrown. I'm aware, that I can use the.(dot) in the filename to place it in the current directory (os). Does this mean a file can be "open" for editing? If so, why am I getting an error? A: You can write to a file in two ways. Either you open a file, as in file = File.open("path/to/file") or you open a filehandle, as in file = File.new("path/to/file")

Saurabhorange Logon Screen Changer Download

- Change your logon screen after windows install - Preferably change the logon screen with in-build your OS - It changes logon screen after windows install. By default.. turboparts logon screen changer logon screen changer turboparts logon screen changer is a simple-to-use, portable application with a name that pretty much sums up its functionality - it allows you to change the logon screen of your operating system.
