.The present invention relates to an air conditioning device for vehicle. A conventional air conditioning device for vehicle including a heat pump is disclosed in Japanese Utility Model Laid-open No. 56-26373. This conventional air conditioning device comprises a control unit including a switching regulator for voltage step-down and an on/off converter for power supply to other units. The on/off converter includes a closed circuit comprising a diode. The air conditioning device further comprises a regulator unit for voltage step-down including a switching regulator. A power source supplying voltage to the regulator is supplied from the on/off converter of the control unit through an electric wire. When the switching regulator is turned on, the DC voltage from the power source is step-down to produce a predetermined output voltage. Upon generation of step-down, the output voltage of the switching regulator is applied to a solenoid and a piezoelectric transformer of the regulator unit. The solenoid and the piezoelectric transformer are driven to convert the output voltage of the switching regulator to a predetermined output voltage so that the voltage is applied to the control unit. In this conventional air conditioning device, the output voltage from the switching regulator is applied to the piezoelectric transformer. The voltage which is applied to the piezoelectric transformer is converted to a predetermined output voltage by the piezoelectric transformer. The power source for the conventional air conditioning device is provided by the switching regulator. Therefore, this switching regulator is maintained in the "ON" state even when the air conditioning device is not operated. Such a large amount of power consumption is caused in this part. In addition, the output voltage of the switching regulator is applied to the piezoelectric transformer. Therefore, the output voltage of the switching regulator is applied to the solenoid and the piezoelectric transformer. It may not be possible to drive these components which require the output voltage of the switching regulator to start up quickly.Aoki Station (Chiba) is a railway station on the Kantō Railway Shinetsu Main Line in Tsukudajima, Chiba, Japan, operated by the private railway operator Shin-Tōbu. It is the starting point of the popular Aoki Route walking and cycling route in Chiba.
