View the inside of a boat. With the advent of the computer mouse, AutoCAD gained widespread adoption among architects and engineers. The introduction of a computer mouse in 1987 made the company's principal technology change - from console based drawing to GUI (Graphical User Interface) drawing. Notable features of AutoCAD include: Active X controls for automation. Supports 64-bit floating point. Supports very large and very small font sizes. Support for unlimited objects and drawing sizes. Automatic object snaps. Supports a variety of rendering features, including rendering from paper to screen. Projects can include annotative annotations, including text, captions, arrows, and other symbols. Supports interplanar drawing, allowing engineers to draw 3D geometry. Supports dynamic block creation. Support for a variety of page layouts and two-page layout variations. Exporting to many popular formats. Supports modeling of objects using Boolean, which allows objects to "connect" or "disconnect" in an abstract way. Support for AutoCAD Plant 3D. Supports tolerance, an important concept in drafting. Supports animation. Supports architecture plans. Supports CNC machinery. Supports the ability to edit and view the structure of drawings. Supports the ability to create predefined styles. Support for importing and exporting of high resolution vector drawings. Supports rendering of meshes. Supports animation of objects. Support for tag-based archiving. Objects can be organized into groups for reuse. Supports the use of controls such as snap-to-guides. Supports camera functions, including tracking and focus. Supports Adobe® PDF file format. Support for technical notes. Supports rendering of section views. Supports object libraries. Integrates with other Autodesk products. Supports a choice of the English, English Canadian, English United Kingdom, French Canadian, French French, German, Italian, Portuguese, Spanish, and Traditional Chinese languages. The 3D Shape data type also includes a plane. Partitioning: Create and edit a 3D partition in 3D. Tracking New tracking AutoCAD 2014 introduced the concept of track. AutoCAD uses it to create freehand lines by using a mouse. When a 2D drawing object is drawn, if it has a tracking object, AutoCAD is able to follow it in 3D space. It allows the tracking user to freely draw a line in 3D, and AutoCAD is able to follow it in 3D space. Also when drawing a 3D object, it can automatically generate a 2D sketch of the 3D object on the same drawing. The distance between the 3D line and the 2D sketch is determined by the user. When the user pauses, AutoCAD then zooms the sketch to the 3D line. Automatic tracking objects Automatic tracking objects are created as automatically as possible. It is as close to a real line as possible. It includes the following attributes: color linetype lineweight pressure Automatic tracking objects are created when: By default, AutoCAD automatically creates the first track by default. Pen AutoCAD is a 2D drawing software. Therefore, some features are provided for 2D. When a user creates a drawing, AutoCAD will display the drawing canvas (typically a sheet of paper af5dca3d97
