I could grab some of the Classes by using Jsoup. But I want to modify some of them, before I'm outputting them on the HTML-page. How can I do this? A: You can use the methods that the NodeList has in order to modify the elements and then recreate the node list by using Document.createElement(). Element original = Document.getElementById("target").getElementsByClassName("hello").first(); if (original!= null) { NodeList nl = Document.getElementById("target").getElementsByClassName("hello"); for(int i
