The universal folder (first) was released in the same year as DirectX and. (now 32-bit). Features. 7. Resources 10.The development of the perimeter of the choroid and of the postnatal growth of the fovea. A complete study of the development of the choroid, sclera, and fovea in human, rabbit, guinea pig, and rat eyes was conducted. The growth and amount of the choroidal tissue in

relation to the stage of maturity of the fovea was examined in young animals of each species. The data are given in Tab. 1. The primary role of the choroid in foveal development is clearly the nourishment and support of the structures that form the foveal band and structures that bind the retina to the fovea. The influence of the choroid on the migration of the fovea is only indirect and in the rabbit considerable intraocular growth of the choroid takes place before the fovea reaches its final position 6d1f23a050
