The nature and function of CD4+CD25+ T cells were examined using a flow cytometric analysis of CD4+CD25+ T cells obtained from an IL-2/IL-15 double transgenic (Tg) mouse model, a splenocyte co-culture model, and a fluorescence-activated cell sorter (FACS) purification approach. The flow cytometric analysis revealed that the double-positive T cells were heterogeneous with respect to cell surface antigen expression and were able to be divided into at least two subsets: CD4+CD25+ T cells that expressed high levels of CTLA-4 and CD8, and CD4+CD25+ T cells that expressed very low CTLA-4 levels. The CD4+CD25+ T cells were enriched by either cell sorting or co-culture methods, and flow cytometric analysis revealed that both subsets possessed highly suppressive activity. Additionally, CD4+CD25+ T cells modified both effector T cell and accessory cell functions. Whereas CD4+CD25- T cells suppressed effector function of both macrophages and conventional T cells by increasing IL-10 production, CD4+CD25+ T cells suppressed effector function of macrophages and conventional T cells by increasing IL-2 production. In contrast, CD4+CD25+ T cells suppressed accessory cell function by increasing IL-10, but not IL-2 production. These data support the notion that CD4+CD25+ T cells play important roles in determining immune responses that have been linked to diseases.A few days after the FBI gave up its case against Lori Drew and Drew's legal troubles were resolved, a more serious issue has been thrust into the limelight: Cyber-bullying. Drew, who is the wife of Drew Magary, the host of the hit podcast Stuff You Should Know on the Earwolf network, was sentenced on July 8, 2010 to two years of probation for her participation in a scheme of creating multiple MySpace pages for the young men involved, one of which gained the attention c6a93da74d
