**What's new:**

- Use the new Pass Control function to intercept your opponents passes and increase your on-ball control over the ball. This is especially useful in dribbling and ball possession.
- AI: the new, more complex AI algorithm creates more intelligent and rewarding decisions for both forwards and defences. Players now make more challenging evasive moves to spot you. The AI will increasingly take up advanced positions during a game, starting from the throw-in line, and if close to goal will move towards the ball.
- Linemen: this year, we're introducing positional defending into the game. Guards will react to certain types of passes and not just tackle the closest player within their position.
- New Techniques: come up with a free-kick bomb from the touchline, master the drills to spread the ball around and score with a first-time finish, or catch your opponent cold with an in-swinging corner.
- Multiple New Players: we've added over 100 new players to improve roster depth, while the transfer system has also been overhauled to make the entire management process more flexible. Enhance your team with the new outfield bench, adding both young and experienced players to your squad.
- Universal Transfer System: you now have the flexibility to customize the development of your players and change the order of your preferred development plays. You also have the power to automate your transfer strategy and accelerate the process.
- Intelligent Matchday Tactics System: opponent analyses make all the difference in the outcome of any match and this year, your AI manager can make use of weather, fatigue levels and changes in the team. In addition to this, have the battle ready with the new Targeting system. You can pick out a specific player and prepare a strategy to contain him by setting the positioning of your players or defenders. Keep them pinned and track him down.

FIFA is an award-winning football video game franchise. The FIFA series has sold over 100 million copies worldwide. Each year tens of millions of gamers take on the role of a professional footballer in FIFA's Career Mode. Team up with friends to take on the game with a range of online options and compete with players around the world. In Career Mode, players will experience the highs and lows of being a professional footballer, learn valuable transfer and contract negotiation skills, and progress through different leagues to become a Legend. FIFA Ultimate Team is where gamers can play as any footballer from the history of the game. Players collect and manage teams of real footballers that they get to build and train like a manager. FIFA 14, which was released in September 2013, gave fans the power to create their very own player via the new My Player Editor. The My Player Editor allows any football fan to edit the physical appearance of any real-life player from any game in the FIFA series, including their shorts, hair and shirt. The changes are applied immediately in-game and the real footballer's name and image will also be used. FIFA Street paved the way for the FIFA franchise, influencing the direction of all EA SPORTS soccer games. Powered by Football EA SPORTS FIFA 22 utilises the same game engine used to power previous FIFA titles and is the most authentic football experience in the franchise. The new "Powered by Football" game engine facilitates faster gameplay, bigger stadiums, and improved passing and dribbling controls. The game engine leverages a sophisticated Artificial Intelligence that means the game can learn how your player plays and "reads the game" on a deeper level. The new engine gives you the control to adapt the game to your playing style and the speed of the game never fluctuates. FIFA 19 goes even further than any previous game. Some of the game's most requested features have been incorporated to deliver a highly polished experience, such as ball physics that are significantly improved over previous seasons.
